

PDF/A in CM/ECF

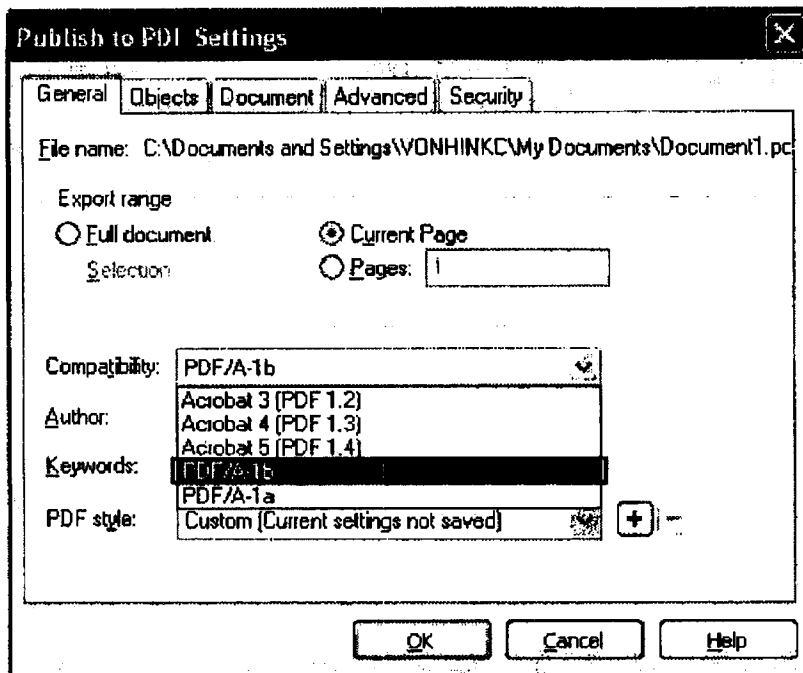

Corel WordPerfect X4 settings for PDF/A

WordPerfect X4 (with Hot Fix 2 installed) and higher provide users the option to publish directly to PDF/A-1a or PDF/A-1b. Instructions for that process are provided on this page. However, there are instances in which masked hyperlinks are not successfully preserved and/or the document fails to convert to PDF/A. Users are encouraged to produce a PDF in WordPerfect and then use Adobe Acrobat Professional to save the PDF file as PDF/A.

From the File menu, select **Publish to PDF**, and click the *Settings* button:

Select **PDF/A-1b** from the "Compatibility" drop-down and click **OK**:

Click OK to return to the "Publish to PDF" screen to complete document production. The compatibility setting will remain set to PDF/A until you change it.
